Phone: +91 8527277438

Email: anjali19dangi@gmail.com

Nationality: Indian

LinkedIn: [Anjali Dangi](#)

RESEARCH INTERESTS

- Computer Vision & Image Processing
- Deep Learning & Intelligent Vision Systems
- Object Detection, Image Classification & Anomaly Detection
- Edge AI & Efficient Deep Learning

EDUCATION

Bachelor of Computer Applications

Guru Gobind Singh Indraprastha University, India (*National Institutional Ranking Framework: 93rd*)

CGPA: 9.52

Relevant Coursework: Artificial Intelligence, Machine Learning, Data Structures, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Cloud Computing

Sep.'23 – Jul.'26

PROJECTS

Driver Drowsiness Detection System Using Computer Vision

Nov.'25 – Jan.'26

- Developed a real-time driver drowsiness detection system using Python, TensorFlow, OpenCV, and Dlib, combining CNN-based image classification with facial landmark detection and Eye Aspect Ratio (EAR) analysis.
- Optimized the hybrid detection approach using EAR threshold (0.25) and CNN confidence thresholding, with an alert response time of approximately 1.5 seconds for prolonged eye closure.
- Implemented real-time audio-visual alerts, webcam-based monitoring, and preprocessing techniques including grayscale conversion, image resizing, normalization, and data augmentation for efficient model performance.
- Evaluated the system across multiple detection approaches, with CNN achieving ~92% accuracy, compared with approximately 75–85% for EAR-based detection and ~82% for facial landmark-based detection, demonstrating improved performance through CNN-based detection.

Medical Insurance Cost Prediction Portal

Aug. – Dec.'24

- Developed a full-stack machine learning application using Python, Flask, Scikit-learn, and MongoDB to predict personalized health insurance costs from demographic and lifestyle factors.
- Performed data preprocessing, exploratory data analysis (EDA), feature analysis, and model evaluation, identifying BMI, smoking status, and age as important factors influencing predicted insurance costs.
- Built a responsive frontend using HTML, CSS, and Bootstrap and connected it with MongoDB for data storage, creating a complete end-to-end machine learning prediction portal.

PROFESSIONAL EXPERIENCE

Machine Learning & Data Science Intern

Jun. – Jul.'25

Ikigai Labs – Summer Internship Program, Delhi, India

- Developed and evaluated 4 supervised learning models (Linear Regression, Decision Tree, Random Forest, XGBoost) on structured datasets, achieving a 15.3% improvement in prediction accuracy over baseline through rigorous feature engineering and cross-validation.
- Designed automated data preprocessing pipelines using Pandas and Scikit-learn, handling missing values, outlier detection, and categorical encoding, reducing manual effort by ~40%.
- Built interactive dashboards using Power BI for real-time data visualization and business intelligence reporting, presenting key performance metrics to stakeholders.
- Collaborated on a team project to build a customer churn prediction dashboard, presenting key findings and model interpretability insights using SHAP values to stakeholders.

TECHNICAL SKILLS

1. **Programming & Machine Learning:** Python, Scikit-learn, TensorFlow, Keras, CNN Architecture Design, Feature Engineering, Hyperparameter Tuning, Model Optimization
2. **Computer Vision:** OpenCV, Image Processing, Facial Landmark Analysis, Real-Time Image Processing, Object Detection, Image Classification
3. **Intelligent AI:** Anomaly Detection, Deep Learning-Based Recognition, Intelligent Vision Systems
4. **AI Research:** Edge AI, Generative AI, Explainable AI
5. **Application Development:** Flask, MongoDB, Power BI
6. **Development Environment:** Jupyter Notebook, VS Code, Git
